

## Boat Wash Instructions

1. Thoroughly rinse surface prior to washing.
2. Shake the bottle well.
3. 1:150 dilution. Add 20mL Boat Wash per 3L of fresh water.
4. While still wet from initial rinsing use a soft, non-abrasive sponge to apply Boat Wash mixture liberally.
5. To avoid staining, do NOT allow Boat Wash to dry on the surface prior to rinsing. Wash small sections of large areas to ensure surface stays wet.
6. Rinse thoroughly after washing.
7. When finished, dry surface with a chamois/soft microfiber or cotton towel to prevent water spots. If water beads are allowed to air dry, any hardness present in the water will give a solid residue which could etch the surface if not removed.
8. Stubborn stains: Remove with a higher concentration of Boat Wash. Requires increased amounts of rinsing.
9. For a more heavy duty clean, use Hull and Waterline Cleaner.
10. TIP: Weekly cleaning of your boat is recommended to prevent surface stains and imperfections.
